Python | AI | Automation Engineer

PROFESSIONAL SUMMARY

Dynamic and results-driven Senior AI Engineer with 8+ years of experience delivering scalable software systems, AI-powered applications, and automation solutions across industries. Specialized in Python, Large Language Models (LLMs), and AI engineering ecosystems, with expertise in building RAG systems, AI agents, intelligent automation workflows, and production-ready AI applications. Adept at designing reliable AI architectures, integrating machine learning capabilities into enterprise platforms, and developing cloud-native solutions using modern engineering practices. Recognized for delivering measurable business impact by automating complex processes, improving operational efficiency, and enabling smarter data-driven solutions. Strong advocate for clean architecture, scalable AI development, continuous improvement, and collaborating with cross-functional teams to exceed client expectations.

TECHNICAL SKILLS

AI and Automation: LLMs, OpenAI API, RAG Systems, AI Agents, Prompt Engineering, AI Workflow Automation, Vector Databases, Embeddings

AI Frameworks: LangChain, LangGraph, LlamaIndex, Hugging Face, PyTorch

Programming: Python, SQL, JavaScript, TypeScript

Backend & APIs: FastAPI, Django, Flask, REST APIs, GraphQL, Microservices

Data & Databases: PostgreSQL, MongoDB, Redis, FAISS, Pinecone

Cloud & DevOps: AWS, Docker, Kubernetes, CI/CD, Linux, Git

PROFESSIONAL EXPERIENCE

REALTECH Inc

Senior AI & Automation Engineer, remote | Oct 2022 – Apr 2026

- Architected and developed AI-powered software solutions by integrating Large Language Models, automation frameworks, and scalable backend systems to solve complex business challenges and improve operational efficiency.
- Built production-ready AI applications using Python, OpenAI APIs, RAG pipelines, embeddings, and vector databases, improving information retrieval accuracy by **45%** and enabling faster access to enterprise knowledge.
- Designed and implemented AI agent workflows using tool calling, external API integrations, and automated decision processes to streamline multi-step business operations and reduce manual workload by **35%**.
- Developed intelligent automation solutions using Python scripts, workflow automation platforms, and system integrations to eliminate repetitive processes and improve productivity across business operations.
- Engineered scalable backend services using FastAPI, Django, PostgreSQL, Redis, Docker, and cloud infrastructure while optimizing AI application performance, reliability, and maintainability.
- Collaborated with product teams, engineers, and stakeholders to identify AI opportunities, transform business requirements into practical solutions, and deliver production-ready AI systems.

Avenue Code

Senior Python Engineer, remote | Oct 2020 – Aug 2022

- Engineered and optimized Python Django and FastAPI backends, introducing modular architectures, async data pipelines, and caching layers that reduced API latency by 35% and enabled seamless scaling for millions of global users.
- Built distributed backend services and asynchronous processing workflows to handle complex business operations, background tasks, and large-scale data processing requirements.
- Automated deployments with Docker, Kubernetes, and GitHub Actions, achieving zero-downtime releases and reducing release cycles from bi-weekly to daily.
- Increased reliability through extensive unit, integration, and end-to-end testing, reaching 90% coverage and reducing production incidents by 40%.
- Provided unit, integration and E2E tests using pytest and Testcontainers.
- Mentored engineers by conducting code reviews, technical workshops, and process improvements, elevating team-wide productivity and code quality.

DB1 Global Software

Senior Python Developer, hybrid | Jul 2019 – Sep 2020

- Designed and implemented Python Django and Flask applications with clean modular architectures, service layers, and dependency injection, improving long-term maintainability and onboarding speed by 40%.
- Developed secure and scalable REST and GraphQL APIs, integrating OAuth2.0 and JWT authentication, audit logging, and role-based permissions for enterprise clients.
- Optimized PostgreSQL-heavy systems by redesigning schemas, applying indexing, and adding Redis caching, which cut query times from seconds to milliseconds and powered real-time analytics dashboards.
- Worked directly with the Product Owner to design solutions leveraging available AWS Services support scaling up the application designed to use a multi-account AWS environment.
- Delivered mobile-first experiences by integrating Python backends with React and Angular frontends, improving end-user engagement by 20%.
- Improved reliability through automated testing frameworks (PyTest, Cypress), achieving 85%+ coverage and lowering production incidents by 30%.

BRQ Digital Solutions

Software Engineer, onsite | May 2018 – Jun 2019

- Assisted with backend development using Python, PHP, JavaScript, and SQL during Internship period.
- Supported backend development activities including API implementation, database operations, and application maintenance.
- Developed small automation scripts and technical utilities to support development workflows and reduce repetitive manual tasks.
- Participated in testing activities, troubleshooting sessions, and code improvement efforts to increase application quality and reliability.

EDUCATION

University of São Paulo(USP) | May 2018 – Jun 2019

Bachelor's Degree in Computer Science
